Number of applications worked: 07

Company Name: Wipro Technologies

02-01-2017 to 26-09-2019

Job title: Senior Application Security Engineer

Number of applications worked on: 15 DAST (Dynamic Application Security Testing) and 10 SAST (Static Application Security Testing) projects

1. Name of the Project: Banking Project

Application security tools used: HP Burpsuite and Veracode.

Description: It is banking application based in UK and operates multiple locations across the Globe; it has many applications which are exposed to external network and also certain applications used by the bank employees are internal.

Responsibilities: As a Senior Application Security Engineer i am handling DAST and SAST end to end, in case of DAST once the RFQ has been assigned i need to jump to

call with the project team to understand the environment on which the testing is been performed and also need perform the SMOKE test before i initiate the scan, wherein for SAST we will receiving the email from the Engagement team post the approval of the RFQ to perform the scan, post that i need to create user profile for the application on the Veracode portal and also i need create the users of the project. There will be a report read out call in case of DAST, wherein i need explain the project team about the vulnerabilities reported in the project.

Role Description: I am handling SAST (Static Application Security Testing) and DAST (Dynamic Application Security Testing) using Veracode which used for Static Application code review and HP Webinspect for Dynamic Application Security Testing.

2. Name of the Project: IOT Project
Application security tools used: HP Burpsuite
Description: This project is related to development and maintenance of IOT machines, which send the data of the machines like the location to the IOT devices. In this project the Development & Testing goes parallel to each other,

Role Description: My responsibilities in this project was to find the vulnerabilities in each of the development release cycle with a detailed report and mitigations which need to be shared with the development project team member.

3. Name of the Project: ENU Project
Application security tools used: HP Burpsuite & IBM Appscan DAST
Description: In this project the development of the applications are done as per the client requirement for the ENU.

Role Description: In this project the responsibility is to find the vulnerabilities as per annual VCM (Vulnerability Compliance Metrics), also whenever the new functionality has been added need to test that particular functionality for any vulnerability.

27-09-2019 until now
Company Name: NTT DATA
Job title: Senior Application Security Engineer

Role Description: In this role I am working on the client applications by finding vulnerabilities using Burp Suite, preparing the POC's, drafting the report. Also worked on finding vulnerabilities in the Customer API's using POSTMAN tool.
